

### MODEL: RLKN Package Air Conditioner

FORM NO. SSC-973 REV. 2

### **Sure Comfort® RLKN Package Air Conditioner**

### **RLKN-B Standard Efficiency**

 Nominal Sizes 6 Tons [21.1 kW] (3 Phase Models Only)

### **RLKN-C Standard Efficiency**

• With Direct Digital Control

### **Table of Contents**

### STANDARD FEATURES INCLUDE:

- R-410A HFC refrigerant.
- Complete factory charged, wired and run tested.
- Scroll compressors with internal line break overload and high-pressure protection.
- Two-stage compressor on all models.
- Convertible airflow.
- TXV refrigerant metering system.
- High Pressure and Low Pressure/Loss of charge protection standard on all models.
- Solid Core liquid line filter drier on each circuit.
- Single slab, single pass designed evaporator coil facilitates easy cleaning for maintained high efficiencies.
- Cooling operation up to 125 degree F ambient.
- Easily removable filter, blower, electric heat, and control access panels permits prompt service.
- Powder Paint Finish meets ASTMB117 steel coated on each side for maximum protection. G90 galvanized.
- One piece top cover and one piece base pan with drawn supply and return opening for superior water management.
- Externally mounted refrigerant gauge ports for easy service diagnostics.
- All 208/230V and 460V models are shipped from factory "VFD Ready" with mating plugs for a field installed VFD kit to provide 2-stage indoor airflow.

- Factory or field-installed electric heat kits available up to 24 kW.
- Easy to install plug-in; slip in, 100% fully modulating economizer.
- Forkable base rails for easy handling and lifting.
- Single point electrical and gas connections.
- High performance belt drive motor with variable pitch pulleys and quick adjust belt system.
- Permanently lubricated evaporator, condenser and gas heat inducer motors.
- Condenser motors are internally protected, totally enclosed with shaft down design.
- 2 inch filter standard with slide out design.
- · Colored and labeled wiring.
- Molded compressor plug.
- Micro Channel evaporators and condenser delivers superior performance with less refrigerant charge and less weight than conventional copper tube/aluminum fin coils In addition the aluminum design has superior formicary corrosion protection and less potential for leaks due to elimination of tube rubbing potential. Its easier to clean and has a more robust surface.
- RLKN-C models equipped with factory installed Direct Digital Control (DDC), and sensors which can connect to LonWorks™ or BACnet® building automation systems for remote monitoring and control.

### **DIRECT DIGITAL CONTROL (RLKN-C MODELS)**

As part of the Direct Digital Control system which allows real time monitoring and communication between rooftop units, the RLKN-C Package Air Conditioner has a Rooftop Unit Controller (RTU-C) factory mounted and wired in the control panel. The RTU-C is a solid-state microprocessor-based control board that provides flexible control and extensive diagnostics for all unit functions. The RTU-C through proportional/integral control algorithms perform specific unit functions that govern unit operation in response to: zone conditions, system temperatures, system pressures, ambient conditions and electrical inputs. The RTU-C features a 16 x 2 character LCD display and a five-button keypad for local configuration and direct diagnosis of the system. New features include a clogged filter switch (CFS), fan proving switch (FPS), return air temperature sensor (RAT), discharge air temperature sensor (DAT) and outdoor air temperature sensor (OAT). Freeze sensors (FS) are used in place of freezestats to allow measurement of refrigerant suction line temperatures. The RLKN-C Package air Conditioner with the RTU-C is specifically designed to be applied in four distinct applications:

The RLKN-C is compatible with a third party building management system that supports the BACnet Application Specific Controller device profile, with the use of a field installed BACnet Communication Module. The BACnet Communication Module plugs onto the unit RTU-C controller and allows communication between the RTU-C and the BACnet MSTP network. A zone sensor, a BACnet network zone sensor, a BACnet thermostat or DDC controller may be used to send the zone temperature or thermostat demands to the RTU-C. The BACnet Communication Module is compatible with MSTP EIA-485 daisy chain networks communicating at 38.4 bps. It is compatible with twisted pair, shielded cables.

The RLKN-C is compatible with a third party building management system that supports the LonMark Space Comfort controller (SCC) functional profile or LonMark Discharge Air Controller (DAC) functional profile. This is accomplished with a field installed LonMark communication module. The LonMark

Communication Module plugs onto the RTU-C controller and allows communication between the RTU-C and a LonWorks Network. A zone sensor, a LonTalk network zone sensor, or a LonTalk thermostat or DDC controller may be used to send the zone temperature or thermostat demands to the RTU-C. The LonMark Communication Module utilizes an FTT-10A free topology transceiver communicating at 78.8 kbps. It is compatible with Echelon qualified twisted pair cable, Belden 8471 or NEMA Level 4 cables. The Module can communication up to 1640 ft. with no repeater. The LonWorks limits of 64 nodes per segment applies to this device.

The RLKN-C is compatible with a programmable 24 volt thermostat. Connections are made via conventional thermostat screw terminals. Extensive unit status and diagnostics are displayed on the LCD screen of the RTU-C.

The RLKN-C is compatible with a zone sensor and mechanical or solid state time clock connected to the RTU-C. Extensive unit status and diagnostics are displayed on the LCD screen of the RTU-C.

A factory or field installed Comfort Alert® module is available for power phase-monitoring protection and additional compressor diagnostics. The alarms can be displayed on the RTU-C display or connected to the "L-Terminal" of a thermostat for notification.

The damper minimum position, actual damper position, power exhaust on/off setpoint, mixed air temperature limit setpoint and Demand Controlled Ventilation (DCV) setpoint can be read and adjusted at the unit controller display or remotely through a network connection.

The Space CO<sub>2</sub> level, mixed air temperature, and Economizer Status (Free Cooling Available, Single or Dual Enthalpy) can be read at the unit controller display or remotely through a network connection. Economizer Faults will trigger a network Alarm and can be read at the unit controller display or remotely through a network connection.

### **RLKN-B SELECTION PROCEDURES**

### Determine cooling and heating requirements at design conditions.

Example:

### 2. Select unit to meet cooling requirements.

Since total cooling is within the range of 6 ton [21.1 kW] unit enter cooling performance from the RLKN-B073 table, at 95°F [35°C] outdoor temperature, 63°F [17°C] wb entering indoor air, and 2100 CFM [991 L/s]:

| lotal capacity    | 65,000 BTUH  19.1 kW | 1 |
|-------------------|----------------------|---|
| Sensible Capacity | 55,400 BTUH [16.2 kW | İ |
| Power input       | 5.3 kW               |   |

And also, at 76°F [24°C] db indoor entering air, and using the formula at the bottom of the page:

Sensible capacity......48,008 BTUH [14.07 kW]

### 3. Determine blower speed and power to meet the system requirements.

At the given external static pressure of 1.0 in W.G., the belt model must be selected. Enter the belt drive blower performance table at 2100 CFM [991 L/s] and 1.0 in W.G. ESP:

RPM.....1100 Watts ......1025 Drive .....L

4. Calculate indoor blower BTUH heat effect.

BTUH = Watts x 3.413 = 3498

### 5. Calculate net cooling capacities.

Net total cooling = 65,000 – 3498 = 61,502 BTUH [18.02 kW] Net sensible cooling = 48,008 – 3498 = 44,510 BTUH [13.04 kW]

### **NOTES:**

- 1. Cooling Performance is rated at 95° F ambient, 80° F entering dry bulb, 67° F entering wet bulb. Gross capacity does not include the effect of fan motor heat. AHRI capacity is net and includes the effect of fan motor heat. Units are suitable for operation to ±20% of nominal cfm. Units are certified in accordance with the Unitary Large Equipment certification program, which is based on AHRI Standard 340/360.
- 2. EER and IEER are rated at AHRI conditions and in accordance with DOE test procedures and AHRI Standard 340/360.
- 3. Outdoor Sound Rating shown is tested in accordance with AHRI Standard 270.

### **NOTES:**

- 1. Cooling Performance is rated at 95° F ambient, 80° F entering dry bulb, 67° F entering wet bulb. Gross capacity does not include the effect of fan motor heat. AHRI capacity is net and includes the effect of fan motor heat. Units are suitable for operation to ±20% of nominal cfm. Units are certified in accordance with the Unitary Large Equipment certification program, which is based on AHRI Standard 340/360.
- 2. EER and IEER are rated at AHRI conditions and in accordance with DOE test procedures and AHRI Standard 340/360.
- 3. Outdoor Sound Rating shown is tested in accordance with AHRI Standard 270.

- 1. Performance shown with dry coil & standard 2" [50.8 mm] filters. 2. Standard CFM @ .075 lbs./cu. ft. 3. Motor efficiency = 80% 4. BHP = Watts x Motor Eff.

5. Add component resistance to duct static to determine E.S.P. as shown on charts.

\*Voltage
C = 208-230 VAC-3PH-60HZ
D = 460 VAC-3PH-60HZ
Y = 575 VAC-3PH-60HZ
NOTES: ① Economizer is designed for downflow or horizontal applications.

### FLUSH MOUNT ROOM TEMPERATURE SENSORS FOR **NETWORKED DDC APPLICATIONS**

### **ROOM TEMPERATURE SENSOR** with TIMED OVERRIDE BUTTON

RHC-ZNS1

10kΩ room temperature sensor transmits room temperature to DDC system. Timed override button allows tenant to change from unoccupied temperature setpoint to occupied temperature setpoint for a preset time.

### **ROOM TEMPERATURE SENSOR** with TIMED OVERRIDE BUTTON and STATUS INDICATOR

**RHC-ZNS2** 

10kΩ room temperature sensor transmits room temperature to DDC system. Timed override button allows tenant to change from unoccupied temperature setpoint to occupied temperature setpoint for a preset time. Status Indicator Light transmits ALARM flash code to occupied space.

### **ROOM TEMPERATURE SENSOR** with SETPOINT ADJUSTMENT and TIMED OVERRIDE BUTTON

RHC-ZNS3

10kΩ room temperature sensor with setpoint adjustment transmits room temperature to DDC system along with desired occupied room temperature setpoint. Timed override button allows tenant to change from unoccupied temperature setpoint to occupied temperature setpoint for a preset time.

### **ROOM HUMIDITY SENSOR**

**RHC-ZNS4** 

Transmits room relative humidity to DDC System.

### **ROOM TEMPERATURE AND RELATIVE HUMIDITY SENSOR** Transmits room temperature and relative humidity to DDC System.

**RHC-ZNS5**

### COMMUNICATION CARDS Field Installed

### BACnet® COMMUNICATION CARD RXRX-AY01

The field installed BACnet® Communication Card allows the RTU-C unit controller to communicate with a third party building management system that supports the BACnet Application Specific Controller device profile. The BACnet® Communication Module plugs onto the unit RTU-C controller and allows communication between the RTU-C and the BACnet MSTP network.

### LonWorks® COMMUNICATION CARD RXRX-AY02

The field installed LonWorks® Communication Card allows the RTU-C unit controller to communicate with a third party building management system that supports the LonMark Space Comfort Controller (SCC) functional profile or LonMark Discharge Air Controller (DAC) functional profile. The LonMark Communication Module plugs onto the RTU-C controller and allows communication between the RTU-C and a LonWorks Network.

### **ROOFCURB ADAPTER**

[ ] Designates Metric Conversions

www.SureComfort.com \_\_\_\_\_\_ 23

### **ROOFCURBS (Full Perimeter)**

- Sure Comfort's new roofcurb design can be utilized on 3 through 6 ton [21.1 kW] models.
- Two available heights (14" [356 mm] and 24" [610 mm]) for ALL models.
- Quick assembly corners for simple and fast assembly.
- Opening provided in bottom pan to match the "Thru the Curb" electrical connection opening provided on the unit base pan.
- 2" [51 mm] x 4" [102 mm] Nailer provided.
- Insulating panels provided.
- Sealing gasket (28" [711 mm]) provided with Roofcurb.
- Packaged for easy field assembly.

| Roofcurb Model | Height of Curb |
|----------------|----------------|
| RXKG-CAD14     | 14" [356 mm]   |
| RXKG-CAD24     | 24" [610 mm]   |

INTEGRAL POWER EXHAUST FOR ECONOMIZER (FIELD INSTALLED ONLY)

AXRX-BGF03(C,D,Y)-RLKN 6 Ton [21.1 kW] Model

- For Honeywell Economizer
- Downflow or horizontal applications
- Requires separate 208-230 volt 1 PH power supply with disconnect or requires separate 460V - 1 PH power supply with disconnect.
- Adjustable switch on economizer, factory preset to energize power exhaust at 95% outside air position
- Polarized plug connects power exhaust relay to economizer

### **GUIDE SPECIFICATIONS - RLKN-B073/RLKN-C073**

You may copy this document directly into your building specification. This specification is written to comply with the 2004 version of the "master-format" as published by the Construction Specification Institute. <a href="www.csinet.org">www.csinet.org</a>.

### **ELECTRIC HEAT PACKAGED ROOFTOP**

**HVAC Guide Specifications Size Range: 6 Nominal Tons** 

Section Description

23 06 80 Schedules for Decentralized HVAC Equipment

23 06 80.13 Decentralized Unitary HVAC Equipment Schedule

23 06 80.13.A. Rooftop unit schedule

1. Schedule is per the project specification requirements.

### 23 07 16 HVAC Equipment Insulation

### 23 07 16.13 Decentralized, Rooftop Units:

- 1. Interior cabinet surfaces shall be insulated with a minimum 3/4-in. thick, minimum 1-1/2 lb density, flexible fiberglass insulation bonded with a phenolic binder, with aluminum foil facing on the air side.
- 2. Insulation and adhesive shall meet NFPA 90A requirements for flame spread and smoke generation.

### 23 09 13 Instrumentation and Control Devices for HVAC

### 23 09 13.23 Sensors and Transmitters:

23 09 13.23.A. Thermostats

- 1. Thermostat must
  - a. have capability to energize 2 different stages of cooling, and 1 stage of heating.
  - b. must include capability for occupancy scheduling.
  - c. energize both "W" and "G" when calling for heat.

### 23 09 23 Direct-digital Control system for HVAC (RLKN-C073 Only)

### 23 09 23.13 Decentralized, Rooftop Units:

23 09 23.13.A. RTU-C controller

- 1. Shall be ASHRAE 62-2001 compliant.
- 2. Shall accept 18-32VAC input power.
- 3. Shall have an operating temperature range from -40°F (-40°C) to 158°F (70°C), 10% 95% RH (non-condensing).
- 4. Controller shall accept the following inputs: space temperature, setpoint adjustment, outdoor air temperature, indoor air quality, outdoor air enthalpy, fire shutdown, return air enthalpy, fan status, remote time clock/door switch.
- 5. Shall accept a CO2 sensor in the conditioned space, and be Demand Control Ventilation (DCV) ready.
- 6. Shall provide the following outputs: Economizer, fan, cooling stage 1, cooling stage 2, heat stage 1, heat stage 2, heat stage 3, exhaust/ occupied.
- 7. Unit shall provide surge protection for the controller through a circuit breaker.
- 8. Shall have a field installed communication card allowing the unit to be Internet capable, and communicate at a Baud rate of 19.2K or faster.
- 9. Shall have an LED display independently showing the status of activity on the communication bus, and processor operation.
- 10. Shall have either a field installed BACnet® plug-in communication card which includes an EIA-485 protocol communication port, or a field installed LonWorks™ plug-in communications card.
- 11. Software upgrades will be accomplished by local download. Software upgrades through chip replacements are not allowed.
- 12. Shall be shock resistant in all planes to 5G peak, 11ms during operation, and 100G peak, 11ms during storage.
- 13. Shall be vibration resistant in all planes to 1.5G @ 20-300 Hz.
- 14. Shall support a bus length of 4000 ft max, 60 devices per 1000 ft section, and 1 RS-485 repeater per 1000 ft sections.
- 23 09 23.13.B. Open protocol, direct digital controller:
  - 1. Shall be ASHRAE 62-2001 compliant.
  - 2. Shall accept 18-30VAC, 50-60Hz, and consume 15VA or less power.
  - 3. Shall have an operating temperature range from -40°F (-40°C) to 130°F (54°C), 10% 90% RH (non-condensing).
  - 4. Shall have either a field installed BACnet® plug-in communication card which includes an EIA-485 protocol communication port, or a field installed LonWorks™ plug-in communications card.
  - 5. The BACnet® plug in communication card shall include built-in protocol for BACNET (MS/TP and PTP modes).
  - The LonWorks<sup>™</sup> plug in communication card shall include the Echelon processor required for all Lon applications.
  - 7. Shall allow access of up to 62 network variables (SNVT). Shall be compatible with all open controllers.
  - 8. Baud rate Controller shall be selectable through the EIA-485 protocol communication port.
  - 9. Shall have an LED display independently showing the status of serial communication, running, errors, power, all digital outputs, and all analog inputs.
  - 10. Shall accept the following inputs: space temperature, setpoint adjustment, outdoor air temperature, indoor air quality, outdoor air enthalpy, compressor lock-out, fire shutdown, enthalpy switch, and fan status/filter status/ humidity/ remote occupancy.

www.SureComfort.com \_\_\_\_\_\_\_31

- 11. Shall provide the following outputs: economizer, fan, cooling stage 1, cooling stage 2, heat stage 1, heat stage 2, heat stage 3/ exhaust.
- 12. Software upgrades will be accomplished by either local or remote download. No software upgrades through chip replacements are allowed.

### 23 09 33 Electric and Electronic Control System for HVAC

### 23 09 33.13 Decentralized, Rooftop Units:

23 09 33.13.A. General:

- Shall be complete with self-contained low-voltage control circuit protected by a replaceable fuse on the 24-v transformer side. Transformer size is 40VA.
- 2. Shall utilize color-coded wiring.
- 3. Unit shall provide a minimum of one 10-pin screw terminal connection board for connection of control wiring.
- 4. Shall include a central control terminal board to conveniently and safely provide connection points for vital control functions such as: smoke detectors, phase monitor, economizer, thermostat, DDC control options, loss of charge, freeze sensor, high pressure switches.

### 23 09 33.13.B. Safeties:

- 1. Compressor over-temperature, over current.
- 2. Loss of charge switch.
  - a. Units with 2 compressors shall have different colored wires for the circuit 1 and circuit 2 low and high pressure switches.
  - b. Loss of charge switch shall use different color wire than the high pressure switch. The purpose is to assist the installer and service technician to correctly wire and or troubleshoot the rooftop unit.
  - c. Loss of charge switch shall have a different sized connector than the high pressure switch. They shall physically prevent the cross-wiring of the safety switches between the high and low pressure side of the system.
- 3. High-pressure switch.
  - a. Units with 2 compressors shall have different colored wires for the circuit 1 and circuit 2 low and high pressure switches.
  - b. High pressure switch shall use different color wire than the low pressure switch. The purpose is to assist the installer and service person to correctly wire and or troubleshoot the rooftop unit.
  - c. High pressure switch shall have a different sized connector than the loss of charge switch. They shall physically prevent the cross-wiring of the safety switches between the high and low pressure side of the system.
- 4. Automatic reset, motor thermal overload protector.
- 5. Freeze protection sensor, evaporator coil.

### 23 09 93 Sequence of Operations for HVAC Controls

23 09 93.13 Decentralized, Rooftop Units:

23 09 93.13 INSERT SEQUENCE OF OPERATION

### 23 40 13 Panel Air Filters

### 23 40 13.13 Decentralized, Rooftop Units:

23 40 13.13.A. Standard filter section

- 1. Shall consist of factory-installed, low velocity, throwaway 1-in. thick fiberglass filters of commercially available sizes.
- 2. Unit shall use only one filter size. Multiple sizes are not acceptable.
- 3. Filter face velocity shall not exceed 365 fpm at nominal airflows.
- 4. Filters shall be accessible through an access panel as described in the unit cabinet section of the specification (23 81 19.13.H).
- 5. Filter rack will also accept 2-in thick fiberglass filters of commercially available sizes by removal of a tab.

### 23 81 19 Self-Contained Air Conditioners

### 23 81 19.13 Small-Capacity Self-Contained Air Conditioners

23 81 19.13.A. General

- 1. Outdoor, rooftop mounted, electrically controlled, heating and cooling unit utilizing a hermetic scroll compressor for cooling duty and electric resistance heat for heating duty.
- 2. Factory assembled, single-piece heating and cooling rooftop unit. Contained within the unit enclosure shall be all factory wiring, piping, controls, and special features required prior to field start-up.
- 3. Unit shall use environmentally safe, R-410A refrigerant.
- 4. Unit shall be installed in accordance with the manufacturer's instructions.
- 5. Unit must be selected and installed in compliance with local, state, and federal codes.

### 23 81 19.13.B. Quality Assurance

- 1. Unit meets ASHRAE 90.1-2010 minimum efficiency requirements.
- 2. Unit shall be rated in accordance with AHRI Standards 210/240.
- 3. Unit shall be designed to conform to ASHRAE 15-2010.
- 4. Unit shall be UL-tested and certified in accordance with ANSI Z21.47 Standards and UL-listed and certified under Canadian standards as a total package for safety requirements.
- 5. Insulation and adhesive shall meet NFPA 90A requirements for flame spread and smoke generation.
- 6. Unit casing shall be capable of withstanding 500-hour salt spray exposure per ASTM B117 (scribed specimen).
- 7. Unit casing shall be capable of withstanding Federal Test Method Standard No. 141 (Method 6061) 5000-hour salt spray.

- Unit shall be designed in accordance with ISO 9001:2008, and shall be manufactured in a facility registered by ISO 9001:2008.
- 9. Roof curb shall be designed to conform to NRCA Standards.
- 10. Unit shall be subjected to a completely automated run test on the assembly line. The data for each unit will be stored at the factory, and must be available upon request.
- 11. Unit shall be designed in accordance with UL Standard 1995, including tested to withstand rain.
- 12. Unit shall be constructed to prevent intrusion of snow and tested to prevent snow intrusion into the control box up to 40 mph.

### 23 81 19.13.C. Delivery, Storage, and Handling

- 1. Unit shall be stored and handled per manufacturer's recommendations.
- 2. Lifted by crane requires either shipping top panel or spreader bars.
- 3. Unit shall only be stored or positioned in the upright position.

### 23 81 19.13.E. Project Conditions

1. As specified in the contract.

### 23 81 19.13.F. Operating Characteristics

- 1. Unit shall be capable of starting and running at 115°F (46°C) ambient outdoor temperature, meeting maximum load criteria of AHRI Standard 210/240 at ± 10% voltage.
- 2. Compressor with standard controls shall be capable of operation down to 40°F (4°C), ambient outdoor temperatures. Accessory low ambient kit is necessary if mechanically cooling at ambient temperatures below 40°F (4°C).
- 3. Unit shall discharge supply air vertically or horizontally as shown on contract drawings.
- 4. Unit shall be factory configured for vertical supply & return configurations.
- 5. Unit shall be field convertible from vertical to horizontal configuration.

### 23 81 19.13.G. Electrical Requirements

1. Main power supply voltage, phase, and frequency must match those required by the manufacturer.

### 23 81 19.13.H. Unit Cabinet

- 1. Unit cabinet shall be constructed of galvanized steel, and shall be bonderized and coated with a Pre-paint baked enamel finish on all externally exposed surfaces.
- 2. Unit cabinet exterior paint shall be: film thickness, (dry) 0.003 inches minimum, gloss (per ASTM D523, 60°F / 16°C): 60, Hardness: H-2H Pencil hardness.
- Evaporator fan compartment interior cabinet insulation shall conform to AHRI Standards 210/240 minimum exterior sweat criteria. Interior surfaces shall be insulated with a minimum 3/4-in. thick, 1 lb. density, flexible fiberglass insulation, aluminum
  foil-face coated on the air side.
- 4. Base of unit shall have locations for thru-the-base electrical connections (factory installed or field installed), standard.
- 5. Base Rail
  - a. Unit shall have base rails on all sides.
  - b. Holes shall be provided in the base rails for rigging shackles to facilitate maneuvering and overhead rigging.
  - c. Holes shall be provided in the base rail for moving the rooftop by fork truck.
  - d. Base rail shall be a minimum of 14 gauge thickness.
- 6. Condensate pan and connections:
  - a. Shall be a condensate drain pan made of a non-corrosive material. Unit must be installed at a slight angle to allow for complete drainage.
  - b. Shall comply with ASHRAE Standard 62.
  - c. Shall use a 3/4" x 14 NPT drain connection through the side of the drain pan. Connection shall be made per manufacturer's recommendations..
- 7. Electrical Connections
  - a. All unit power wiring shall enter unit cabinet at a single, factory-prepared, knockout location.
  - b. Thru-the-base capability
    - i. Standard unit shall have a thru-the-base electrical location(s) using a raised, embossed portion of the unit basepan.
    - ii. No basepan penetration, other than those authorized by the manufacturer, is permitted.
- 8. Component access panels (standard)
  - a. Cabinet panels shall be easily removable for servicing.
- 9. Component access panels (optional)
  - a. Panels covering control box, indoor blower assembly, indoor blower motor and air filters shall have metal hinges and quarter (1/4) turn latches factory installed only.

### 23 81 19.13.J. Coils

- 1. Aluminum MicroChannel evaporator and condenser coils on all models.
  - a. Shall have aluminum lanced fins thermally bonded to aluminum multi-port flat tube design (microchannel) tubes. Coils shall be furnace brazed and contain epoxy lined shrink wrap on all aluminum to copper connections.
  - b. Shall be leak tested using helium mass spectrometry. The leak rate shall not exceed 6.5 x 10<sup>-5</sup> sccs of 100% helium at 200 psig, and qualified to UL 1995 burst test at 1950 psig.
  - c. Evaporator coil includes internal distributor plate to prevent mal-distribution of two-phase refrigerant.

www.SureComfort.com \_\_\_\_\_ 33

### 23 81 19.13.K. Refrigerant Components

- 1. Refrigerant circuit shall include the following control, safety, and maintenance features:
  - a. Thermal Expansion Valves (TXV).
  - b. Refrigerant filter drier.
  - c. Service gauge connections on suction and liquid lines.
  - d. External pressure gauge ports access shall be located in front exterior of cabinet.

### Compressors

- a. Unit shall use one fully hermetic, scroll compressor.
- b. Compressor motors shall be cooled by refrigerant gas passing through motor windings.
- c. Compressors shall be internally protected from high discharge temperature conditions.
- d. Compressors shall be protected from an over-temperature and over-amperage conditions by an internal, motor overload device.
- e. Compressor shall be factory mounted on rubber grommets.
- f. Compressor motors shall have internal line break thermal and current overload protection along with high pressure differential protection.
- g. Crankcase heaters shall not be required for normal operating range.

### 23 81 19.13.L. Filter Section

- 1. Filters access is specified in the unit cabinet section of this specification.
- 2. Shall consist of factory-installed, low velocity, throw-away 1-in. thick fiberglass filters.
- 3. Filter face velocity shall not exceed 365 fpm at nominal airflows.
- 4. Filters shall be standard, commercially available sizes.
- 5. Only one size filter per unit is allowed.
- 6. Filter rack will also accept 2-in thick fiberglass filters of commercially available sizes by removal of a tab.

### 23 81 19.13.M. Evaporator Fan and Motor

- 1. Evaporator fan motor:
  - a. Shall have permanently lubricated bearings.
  - b. Shall have inherent automatic-reset thermal overload protection.
  - c. Shall have a maximum continuous bhp rating for continuous duty operation; no safety factors above that rating shall be required.
- 2. Belt-driven Evaporator Fan:
  - a. Belt drive shall include an adjustable-pitch motor pulley.
  - b. Shall use sealed, permanently lubricated ball-bearing type.
  - c. Blower fan shall be double-inlet type with forward-curved blades.
  - d. Shall be constructed from steel with a corrosion resistant finish and dynamically balanced.
- 3. High-Static Belt-driven Evaporator Fan Motor(s) and Drive(s):
  - a. High-static motor(s) and drive(s) shall be factory-installed to provide additional performance range.

### 23 81 19.13.N. Condenser Fans and Motors

- 1. Condenser fan motors:
  - a. Shall be a totally enclosed motor.
  - b. Shall use permanently lubricated bearings.
  - c. Shall have inherent thermal overload protection with an automatic reset feature.
  - d. Shall use a shaft-down design. Shaft-up designs including those with "rain-slinger devices" shall not be allowed.
- 2. Condenser Fans shall:
  - a. Shall be a direct-driven propeller type fan
  - b. Shall have aluminum blades riveted to corrosion-resistant steel spiders and shall be dynamically balanced.

### 23 81 19.13.O. Special Features

- 1. Integrated Economizers:
  - a. Integrated, gear-driven parallel modulating blade design type capable of simultaneous economizer and compressor operation.
  - b. Module designed for vertical or horizontal return configurations. Vertical return configuration shall be available as a factory installed option.
  - c. Damper blades shall be galvanized steel with metal gears. Plastic or composite blades on intake or return shall not be acceptable.
  - d. Shall include all hardware and controls to provide free cooling with outdoor air when temperature and/or humidity are below setpoints.
  - e. Shall be equipped with gear driven dampers for both the outdoor ventilation air and the return air for positive air stream control.
  - f. Shall be capable of introducing up to 100% outdoor air.
  - g. Shall be equipped with a barometric relief damper capable of relieving up to 100% return air. The barometric relief damper shall include seals, hardware and hoods to relieve building pressure. Damper shall gravity close upon unit shut down.
  - h. Shall be designed to close damper(s) during loss-of-power situations with spring return built into motor.

- i. An outdoor single-enthalpy sensor shall be provided as standard. Outdoor air enthalpy set point shall be adjustable and shall range from the enthalpy equivalent of 63°F @ 50% rh to 73°F @ 50% rh. Additional sensor options shall be available as accessories.
- j. The economizer controller shall also provide control of an accessory power exhaust unit function. Factory set at 70%, with a range of 0% to 100%.
- k. The economizer shall maintain minimum airflow into the building during occupied period and provide design ventilation rate for full occupancy.
- I. Economizer controller shall accept a 0-10Vdc CO<sub>2</sub> sensor input over a CO<sub>2</sub> range of 0-2000 ppm for IAQ/DCV control. In this mode, dampers shall modulate the outdoor-air damper to provide ventilation based on the sensor input.
- m. Actuator shall be direct coupled to economizer gear. No linkage arms or control rods shall be acceptable.
- n. Economizer controller shall provide indications when in free cooling mode, in the DCV mode, or the exhaust fan contact is closed.
- o. Ultra Low Leak Dampers shall meet California Title 24 requirements.
- p. Economizer controller shall meet California Title 24 FDD (Fault Detection and Diagnostics) requirements.
- 2. Two-Position Damper
  - a. Damper shall be a Two-Position Damper. Damper travel shall be from the full closed position to the field adjustable %-open setpoint.
  - b. Damper shall include adjustable damper travel from 25% to 100% (full open).
  - c. Damper shall include single or dual blade, gear driven damper and actuator motor.
  - d. Actuator shall be direct coupled to economizer gear. No linkage arms or control rods shall be acceptable.
  - e. Damper will admit up to 100% outdoor air for applicable rooftop units.
  - f. Damper shall close upon indoor (evaporator) fan shutoff and/or loss of power.
  - g. The damper actuator shall plug into the rooftop unit's wiring harness plug. No hard wiring shall be required.
  - h. Outside air hood shall include aluminum water entrainment filter.
- 3. Manual damper
  - a. Manual damper package shall consist of damper, air inlet screen, and rain hood which can be preset to admit up to 50% outdoor air for year round ventilation.
- 4. Head Pressure Control Package
  - a. Controller shall control coil head pressure by condenser-fan cycling.
- 5. Condenser Coil Hail Guard Assembly
  - a. Shall protect against damage from hail.
  - b. Shall be louvered design.
- 6. Thru-the-Base Connectors:
  - a. Kits shall provide connectors to permit electrical connections to be brought to the unit through the unit basepan.
- 7. Propeller Power Exhaust:
  - a. Power exhaust shall be used in conjunction with an integrated economizer.
  - b. Independent modules for vertical or horizontal return configurations shall be available.
  - c. Horizontal power exhaust shall be mounted in return ductwork.
  - d. Power exhaust shall be controlled by economizer controller operation. Exhaust fans shall be energized when dampers open past the 0-100% adjustable setpoint on the economizer control.
- 8. Roof Curbs (Vertical):
  - a. Full perimeter roof curb with exhaust capability providing separate airstreams for energy recovery from the exhaust air without supply air contamination.
  - b. Formed galvanized steel with wood nailer strip and shall be capable of supporting entire unit weight.
  - c. Permits installation and securing of ductwork to curb prior to mounting unit on the curb.
- 9. Outdoor Air Enthalpy Sensor:
  - a. The outdoor air enthalpy sensor shall be used to provide single enthalpy control. When used in conjunction with a return air enthalpy sensor, the unit will provide differential enthalpy control. The sensor allows the unit to determine if outside air is suitable for free cooling.
- 10. Return Air Enthalpy Sensor:
  - a. The return air enthalpy sensor shall be used in conjunction with an outdoor air enthalpy sensor to provide differential enthalpy control.
- 11. Indoor Air Quality (CO<sub>2</sub>) Sensor:
  - a. Shall be able to provide demand ventilation indoor air quality (IAQ) control.
  - b. The IAQ sensor shall be available in wall mount with LED display. The set point shall have adjustment capability.
  - c. The sensor shall provide a 0-10Vdc output for a CO<sub>2</sub> input range of 0-2000 ppm.
- 12. Smoke detectors:
  - a. Shall be a Four-Wire Controller and Detector.
  - b. Shall be environmental compensated with differential sensing for reliable, stable, and drift-free sensitivity.
  - c. Shall use magnet-activated test/reset sensor switches.

- d. Shall have a recessed momentary switch for testing and resetting the detector.
- e. Controller shall include:
  - i. One set of normally open alarm initiation contacts for connection to an initiating device circuit on a fire alarm control panel
  - ii. Two Form-C auxiliary alarm relays for interface with rooftop unit or other equipment.
  - iii. One Form-C supervision (trouble) relay to control the operation of the Trouble LED on a remote test/reset station.
  - iv. Capable of direct connection to two individual detector modules.
  - v. Can be wired to up to 14 other duct smoke detectors for multiple fan shutdown applications.
- 13. Non-Powered convenience outlet.
  - a. Outlet shall be powered from a separate 115-120v power source.
  - b. A transformer shall not be included.
  - c. Outlet shall be field-installed and internally mounted with easily accessible 115-v female receptacle.
  - d. Outlet shall include 15 amp GFI receptacle.
  - e. Outlet shall be accessible from outside the unit.
  - f. Outlet shall have a wet location, while in use cover.
- 14. Fan/Filter Status Switch:
  - a. Switch shall provide status of indoor evaporator fan (ON/OFF) or filter (CLEAN/DIRTY).
  - b. Status shall be displayed either over communication bus (when used with direct digital controls) or through the controller LCD display inside the unit control box.

### 15. Electric Heat:

- a. Heating Section
  - i. Heater element open coil resistance wire, nickel-chrome alloy, strung through ceramic insulators mounted on metal frame. Coil ends are staked and welded to terminal screw slots.
  - ii. Heater assemblies are provided with integral fusing for protection of internal heater circuits not exceeding 48 amps each. Auto reset thermo limit controls, magnetic heater contactors (24 v coil) and terminal block all mounted in electric heater control box (minimum 18 ga galvanized steel) attached to end of heater assembly.
