

Introducing the Floating Air line of ductless mini-splits —designed with distributors & technicians in mind

SKU reduction

With just 40 SKUs across three tiers, the Floating Air[™] line offers easier inventory management. Expanded from the previous platform, each tier offers increased heating performance and indoor unit applications. And all wall-mounted units of the same voltage are universal across tiers, simplifying product matchups for homeowners.

PlusOne® FastPro easy install & service

Simplifying installation and saving significant time on the job, our PlusOne *FastPro* design built into all wall-mounted units¹ features alignment arrows for confident installation, kickstands for a larger work area and guick removal of the blower wheel assembly for faster cleaning.

Dedicated support team

In addition to multiple stocking distribution centers, we have a newly developed team dedicated to supporting ductless mini-split products, so it's quick and easy to get the equipment you need while ensuring contractors have trusted support.

40% faster install² 50% faster service² 45% faster cleaning²

Low failure rates

Feel confident carrying and selling Floating Air products. Every model is equipped with Diamonblue™ Advanced Corrosion Protection—designed to extend the unit's life—and is engineered to heat and cool efficiently. Plus, certain models feature extreme temperature operation, with cooling in ambient temperatures down to 5°F and heating down to -22°F.

Features homeowners love

Not only is it affordable, but the Floating Air line is equipped with features like built-in Wi-Fi connectivity for smart control³, a Precision Inverter[®] compressor and sustainable operation—making it easier than ever for contractors to sell to homeowners.
